Overview & Platform Philosophy

What CampaignMasta is and how it helps PNG candidates win elections

CampaignMasta is a purpose-built digital command centre for Papua New Guinea election candidates. It covers the complete lifecycle of a campaign — from registering your first supporter to running a live polling day war room — all in a single, mobile-friendly platform designed specifically for PNG's unique political and geographic landscape.

"Every vote, every ward, every promise — tracked, managed, and acted on. CampaignMasta gives PNG candidates the professional infrastructure to run modern, data-driven campaigns."

Who It Is Built For

- **District Open Candidates** — managing one district across multiple LLGs and wards
- **Provincial Candidates** — managing an entire province with full district rollup reporting
- **Campaign Managers** — coordinating team, outreach, and data across the full operation
- **District & LLG Coordinators** — tracking supporters and events in their zone
- **Ward Coordinators & Scrutineers** — reporting from the ground on polling day

Core Design Principles

Mobile-First Mobile-First

Works on any Android or iOS phone, no laptop required

PNG Geography Built-In PNG Geography Built-In

Province → District → LLG → Ward → Village hierarchy pre-loaded

Coordinator Hierarchy Coordinator Hierarchy

7-level chain of command, each level sees only their own area

Incentive Tracking Incentive Tracking

Every supporter registration counted and rolled up the chain

Role-Based Access Role-Based Access

Each team member sees only what their role allows

Audit Trail Audit Trail

Every action is logged — who did what, and when

Offline-Ready Android App Offline-Ready Android App

Native mobile app for field use with or without internet

AI-Assisted AI-Assisted

Generate ward briefs and speech notes automatically from your data

02

Dashboard & Campaign Metrics

The live pulse of your campaign — everything at a glance

The Dashboard is the first screen every team member sees after login. It shows a real-time snapshot of your entire campaign so you can instantly see what needs attention, what is going well, and what is overdue.

Live Metric Cards

Metric	What It Shows	Why It Matters
Total Supporters	Number of people registered in your database	Track growth of your registered base
Strong Supporters	Count with 'Strong Supporter' status	Your confirmed vote block
Undecided Contacts	Count still undecided	Persuasion targets — needs follow-up
SMS Consented	People who agreed to receive messages	Your legal messaging audience
Weak Wards	Wards with low support strength	Geography needing urgent attention
Overdue Tasks	Tasks past their due date	Operational gaps requiring action
Open Issues	Unresolved community issues	Local concerns you must address
Pending Promises	Promises not yet delivered	Accountability tracker
Polling Incidents	Active open incidents from polling locations	Election day risk monitor

Dashboard Panels

- **Calls Due Today**

Lists influencers and contacts whose next scheduled call is today or overdue. Quiet coordinators are highlighted. Direct link to log each call.
- **Open Tasks**

Shows the 8 highest-priority tasks by due date. Colour-coded by urgency. One-click to create a new task.
- **Upcoming Events**

Next 5 ward visits, rallies, and meetings. Click through to event detail and talking points.
- **Open Issues**

Latest community issues needing response. Category and priority shown at a glance.
- **Prepaid Credit Alert**

If any service wallet (SMS, AI, WhatsApp) is running low, an alert appears here before you run out mid-campaign.

Quick Actions

From the dashboard, one tap takes you directly to: Register supporter · Record call · Compose message · Create task · Plan event · Record issue · Submit polling status · View reports · Check usage balance.

03

Supporter Registry

Your most important asset — every voter who has committed to you

The Supporter Registry is the heart of your campaign database. Every person who has expressed support is recorded here with full contact details, geographic location, demographic data, and support status. The system detects and flags potential duplicate entries automatically.

What You Can Record Per Supporter

Field	Details
Full Name	Up to 160 characters
Gender	Female / Male / Other / Unspecified
Age Range	Flexible text field (e.g. '35–45')
Phone Number	Primary contact number
Geographic Location	Province → District → LLG → Ward → Village
Clan	Clan or tribal affiliation
Church / Community Group	Primary group affiliation
Occupation	Employment or community role
Enrollment Status	Verified Enrolled / Needs Re-enrolment / Unknown
Support Status	Strong / Leaning / Undecided / Not Supportive / Unknown
Influence Level	High / Medium / Low — how much sway they have in their community
Introduced By	Which team member brought them in
Main Issue	What issue matters most to this person
Follow-Up Required	Flag + scheduled follow-up date
SMS Consent	Has this person agreed to receive messages
Registered By	Which team member recorded this entry (drives incentive credit)
Notes	Free-text additional notes

Every supporter is automatically credited to the volunteer who registered them and to each coordinator above — feeding the performance and incentive tracking covered in Section 14, Team, Hierarchy & Incentives.

Key Capabilities

- Search by name, phone number, or village — results appear instantly
- Automatic duplicate detection: system warns if a record with the same name, phone, ward, and village already exists
- Every registration is attributed up the coordinator chain for incentives and accountability
- Filter supporters by ward, status, influence level, or follow-up flag
- Bulk import via CSV (see Data Operations section)
- Export supporter lists for offline use or external reporting
- Each supporter links to their call history, messages received, and events attended

04

Calls & Relationship Management

Never miss a key contact — track every conversation with influencers and supporters

Campaigns are won through relationships. The Calls module ensures that every important person — community leaders, church elders, business owners, clan heads — is contacted on schedule. The system automatically calculates when each person is next due for a call and alerts you when follow-up is overdue.

The Influencer CRM

Track your most important relationships with built-in contact frequency scheduling, influence scoring, and call outcome logging.

Influencer Profile Fields

Field	Details
Full Name + Photo	Identity with optional profile photo
Phone & Alternative Phone	Primary and backup contact numbers
Email	Electronic contact
Geographic Location	Province → District → LLG → Ward → Village
Community Role	e.g. Village Elder, Church Pastor, Market Organiser
Influence Category	e.g. Clan Head, Women's Leader, Business Owner
Influence Level	High / Medium / Low
Estimated Network Size	Approximate number of people they can influence
Relationship Status	Strong / Medium / Weak / Unknown
Preferred Contact Method	Call / SMS / WhatsApp / Visit
Contact Frequency	Days between contacts — High=7, Medium=14, Low=30 (configurable)
Last Call / Meeting / Message Date	Auto-updated when activity logged
Next Contact Due Date	Auto-calculated from last contact + frequency
Assigned Owner	Which team member is responsible for this relationship
Influence Score	Computed score (30–100) from level, network size, and relationship

Call Log — What Gets Recorded

Call Outcome: Answered / Missed / Call Back / Switched Off / Wrong Number

Discussion Summary: Full text of what was discussed

Issues Raised: Any community problems the person raised

Commitments Made: What the candidate or team committed to

Follow-Up Required: Flag + specific follow-up date

Call Duration: How long the conversation lasted

Caller: Which team member made the call

Automated Behaviours

- When a call is logged, the influencer's Last Call Date and Next Contact Due Date update automatically
- The dashboard Calls Due panel surfaces everyone who is overdue or due today
- Quiet coordinator alerts: if a coordinator has not logged any activity recently, an escalation flag appears
- High influence contacts default to 7-day recall; Medium to 14 days; Low to 30 days — all configurable

05

Messages & Team Communications

Reach your team, supporters, and influencers through one unified messaging centre

The Messages module lets you compose and send communications to any subset of your network — by geography, by role, or to individual people. Every message is tracked: who received it, who read it, and who acknowledged it.

✉ Message Types

Standard, Polling Day Reminder, Preference Instructions, Constituency Newsletter

✉ Recipient Targeting

All Team, Specific LLG, Specific Ward, All Supporters, custom groups

✉ Delivery Channels

In-App, SMS, Email, WhatsApp — per message

✉ Priority Levels

Normal / Important / Urgent — controls urgency display

✉ Scheduled Sending

Set a future date and time for delivery

✉ Attachments

Attach documents, images, or PDF files

✉ Read Receipts

Track who has read each message

✉ Acknowledgement

Require team members to formally acknowledge critical messages

✉ Draft Mode

Save as draft before sending, preview recipient count

✉ Consent Enforcement

Only sends to supporters who have given consent to receive messages

06

Tasks & Action Tracking

Assign, monitor, and complete every campaign action item

Tasks keep your campaign moving. Every action that needs doing — from arranging transport for a ward visit to following up on a community promise — is created as a task, assigned to a team member, given a priority, and tracked to completion.

Tasks keep your campaign moving. Every action that needs doing — from arranging transport for a ward visit to following up on a community promise — is created as a task, assigned to a team member, given a priority, and tracked to completion.

Field	Options / Detail	Purpose
Priority	Low / Normal / High / Urgent	Colour-coded urgency in all views
Status	Pending / In Progress / Completed / Overdue / Cancelled	Full lifecycle tracking
Geographic Scope	Province → District → LLG → Ward	Spatial ownership of tasks
Due Date	Specific date for completion	Dashboard shows overdue tasks immediately
Attachment	Upload any file (photo, PDF, document)	Context for whoever picks it up
Completion Notes	Free text when marking done	Evidence of what was done
Assigned By / To	Full team member trail	Accountability at every level

07

Events & Ward Visits

Plan, manage, and record every campaign appearance

From a village meeting to a full rally, every campaign appearance is planned and tracked in the Events module. Each event has its own logistics checklist, attendance register, and post-event report — building a permanent record of your entire campaign trail.

Event Types & Venue Types

Event Types	Venue Types
Ward Visit, Rally, Meeting Fundraiser, Awareness, Polling Training	Market Day, Church Service, Roadside Rally Village Meeting, Feast / Mumu, Formal Hall, Other

What Gets Planned Per Event

- **Talking Points** — candidate briefing notes for this specific audience
- **Issues to Address** — community concerns to acknowledge
- **People to Acknowledge** — clan elders, church leaders, local identities
- **Host Person** — who is organising or hosting the event
- **Security Notes** — any safety considerations
- **Logistics Checklist** — itemised to-do list with team assignments
- **Ward Coverage** — which wards will have people attending (links to speech suggestions)
- **Expected vs Actual Attendance** — crowd size planning and reporting
- **Attendance Register** — check people in on the day with name, phone, village
- **Photos & Videos** — upload media from the event
- **Event Report** — post-event narrative and observations

08

Ward Briefs & Local Intelligence

Know every ward before you arrive — intelligence that wins votes

The Ward Briefs module is your intelligence database. Before visiting any ward, your team builds a comprehensive profile covering population, community groups, key people to acknowledge, local issues, infrastructure, access routes, and historical voting patterns. When you arrive, you already know the ward.

Ward Intelligence = Confidence on the Ground

Candidates who know the ward's clan structure, the councillor's name, the top issue, and who the church elder is make a far stronger impression than those who arrive unprepared.

Complete Ward Profile Fields

Category	Fields
People	Councillor name, key clans, important families
Community Groups	Youth groups, women's groups, church groups, business groups
Infrastructure	Schools, markets, health facilities, important landmarks, access routes, meeting places
Population	Population estimate, estimated voting population
Political	Support strength (Strong/Medium/Weak/Unknown), previous election notes, security concerns
Issues	Main community issues (linked to Issues module)
Candidate Brief	Notes for candidate — talking points, sensitivities, commitments

Ward Brief Detail View

When you open a ward brief, the system assembles a live dashboard from your data:

- Current supporter count and undecided count for this ward
- Key influencers to acknowledge, with their role
- All open community issues linked to this ward
- Open promises made in this ward and their delivery status
- Upcoming and past events held in this ward
- Landmarks, access routes, and meeting places
- AI-generated ward brief and speech notes (if AI module enabled)

09

Community Issues & Promises

Track what your communities need and ensure you deliver on your word

Papua New Guinea voters have specific, local concerns — road access, school facilities, water supply, health services. The Issues and Promises modules ensure every concern is recorded, every commitment is tracked, and nothing falls through the cracks.

Community Issues

Title & Category: What the issue is and how it is classified

Geographic Location: Province → District → LLG → Ward → Village — precisely where the issue is

Priority: Low / Normal / High / Urgent — ranked by urgency

Status: New → Under Review → Follow Up → Resolved / Deferred

Reported By: Who raised the issue (community member name)

Related Event: Which ward visit or rally surfaced this issue

Related Influencer: Community leader associated with this concern

Photos: Photographic evidence of the issue

Promise Tracker

Every commitment a candidate makes — whether at a village meeting or in a formal event — is recorded in the Promise Tracker with a delivery date and assigned follow-up owner.

Field	Detail
Promise Category	Infrastructure, Education, Health, Water & Sanitation, Economic, Services, Other
Made By / Made To	Candidate or team member name, recipient group or individual
Geographic Scope	Province → District → LLG → Ward
Promise Date	When the commitment was made
Target Date	When it should be delivered
Status	Open → In Progress → Delivered / Cancelled / Deferred
Delivery Evidence	Upload receipt, photo, or official document when fulfilled
Public Facing	Mark delivered promises as visible on the public constituency page
Follow-Up Owner	Team member accountable for chasing delivery

Polling Day War Room

Real-time command and control on election day

Polling day is the most critical 12 hours of the entire campaign. CampaignMasta's Polling War Room gives your campaign a live operations centre — tracking every booth, every scrutineer, every tally, and every incident in real time from a central command dashboard.

The Polling Command Centre aggregates live tally counts from all booths, shows scrutineer check-in status, flags security risks, and surfaces unresolved incidents — all updating in real time as your scrutineers submit reports from the field.

Polling Location Setup

- Location Name & GPS Coordinates:** Exact booth identification and mapping
- Primary & Backup Scrutineer:** Two assigned team members per booth
- Security Risk Level:** Low / Moderate / High / Refused access
- Expected Turnout:** Forecast number of voters
- Historical Vote Data:** Previous election results stored per booth (e.g. 2022: Our Candidate 340, Opponent 120)
- Transport Status:** Whether scrutineer has transport confirmed

Live Booth Status Reports

Scrutineers submit status updates throughout polling day. Each update captures:

Data Point	What It Confirms
Scrutineer Present	Your representative is physically at the booth
Booth Open	Voting is underway
Materials Available	Ballot boxes and papers are in order
Communication OK	Scrutineer has working phone signal
Our Tally	Running count of observed votes for your candidate
Transport Notes	Any issues with scrutineer or voter transport
Logistical Issues	Any operational problems at the booth
Notes	Free-text situation report

Incident Reporting

Any polling irregularity, security concern, or logistical problem is reported as an incident. Each incident has a priority level (Normal / High / Urgent) and a status (Open → In Progress → Resolved). The War Room dashboard shows all open incidents prominently so the command team can respond immediately.

11

Reports & Analytics

Data-driven decision-making across your entire campaign

The Reports module gives candidates and campaign managers a geographic rollup of campaign performance. See where you are strong, where you are weak, and where effort is needed — broken down by District, LLG, and Ward.

■ Geographic Rollup

Supporter counts grouped by District → LLG → Ward with strong vs undecided split

■ Ward Support Map

Support strength rating per ward — quickly identify weak areas

■ Supporter Growth

Track how your registered base grows over the campaign period

■ Engagement Metrics

Messages sent, read rates, call completion rates

■ Polling Location Summary

Booth-by-booth tally summary from polling day

■ Export Capability

Download supporter lists, call logs, ward data, event records, polling reports

Export System

Exports can be controlled — standard users submit an export request, which a senior manager approves before the file is generated. Superusers receive instant approval. Available export types: Supporters, Calls, Wards, Events, Messages, Polling, Team.

12

Data Operations — Import & Export

Bulk load your existing data and extract what you need

If you have existing supporter lists, team member records, or ward data in a spreadsheet, you can bulk import them directly into CampaignMasta. The import system validates every row and reports exactly which records succeeded and which had errors — no silent failures.

Import Type	What Gets Imported
Supporters	Full supporter profiles from CSV
Team Members	Coordinator and volunteer records
Influencers	CRM contacts with roles and ward assignments
Ward Data	Community issues, ward profile information
Polling Locations	Booth locations with scrutineer assignments
Geography	Custom province/district/LLG/ward/village data

Import Validation

- Every row is validated before import — required fields, format checks, geographic lookups
- Import summary shows: Total Rows / Valid Rows / Error Rows
- Error detail report shows exactly which rows failed and why
- Import history is preserved so you can track all bulk operations and who performed them

13

AI Assistant Tools

Generate ward briefs and campaign speeches automatically from your own data

The AI module uses your own campaign data — ward profiles, supporter counts, community issues, influencer relationships, events, and promises — to automatically generate draft ward visit briefs and speech notes. Every AI output goes through human review before use.

AI That Knows Your Campaign

Unlike generic AI tools, CampaignMasta's AI uses the actual data in your campaign database — your wards, your supporters, your issues, your promises — to generate content that is relevant, accurate, and specific to your campaign.

AI Work Item Types

◆ Ward Brief

A full pre-visit briefing document for a specific ward — population, issues, key people, talking points, supporter counts, historical notes

◆ Speech Notes

Talking points for a specific event or ward visit, drawing on local issues, community groups, and promises made in that area

◆ Daily Summary

Campaign summary covering activities, calls due, and key priorities

◆ Call Suggestions

Recommended talking points for upcoming calls with specific influencers

◆ Issue Trends

Analysis of community issues across wards to identify campaign themes

◆ Message Draft

Suggested message content for outreach to supporters or team

◆ Event Report

Post-event summary draft from attendance and notes

Human Review Workflow

Every AI-generated item enters a review queue. A senior team member reads the output, can edit it, and marks it Approved or Rejected with notes. Only approved content is used. This ensures AI assists — it does not replace — the candidate's judgment.

14

Team, Hierarchy & Incentives

A complete chain of command from candidate to volunteer — with built-in accountability

CampaignMasta mirrors the real structure of a PNG campaign as a multi-level chain of command. Each coordinator builds and manages their own sub-team, sees only the data in their own area, and every supporter they and their team register is counted and rolled up the chain for performance and incentives.

The Coordinator Hierarchy

For a Provincial campaign the chain runs top to bottom as below. For a District (Open) campaign the Campaign Manager is the top field coordinator and the District Coordinator layer is simply not used.

Level / Role	Sees Data For	Can Create
1. Candidate	Whole campaign	Any role below
2. Campaign Manager (Provincial Coordinator)	Whole campaign	District coord & below
3. District Coordinator	Their district only	LLG coord & below
4. LLG Coordinator	Their LLG (all its wards)	Ward coord & below
5. Ward Coordinator	Their ward (all its areas)	Area coord, volunteer
6. Area Coordinator	Their area / village	Volunteers
7. Volunteer	Their own registrations	(field registration only)

Build Your Own Team — With Approval

Any coordinator can add the roles beneath them, but a new member must be approved by the level directly above the person who added them — so the chain of command stays accountable and no one is added without a supervisor's sign-off.

- A **Ward Coordinator** can add an Area Coordinator or Volunteer — the **LLG Coordinator** approves
- An **Area Coordinator** can add a Volunteer — the **Ward Coordinator** approves
- Senior roles (Candidate, Campaign Manager) add members that are active immediately
- Until approved, a new member is held as **Pending** and cannot yet log in or act
- Mobile logins (username + password) can be issued to any member for the Android app

Each Level Sees Only Their Own Area

A ward coordinator sees their ward; an LLG coordinator sees every ward in their LLG; a district coordinator sees their whole district — but never another district. Data rolls upward automatically, so seniors get the complete picture while the field stays focused.

Villages Created On Request

Provinces, districts, LLGs and wards are standard and pre-loaded. Villages vary on the ground, so a Ward Coordinator can add a new village when needed — it is then approved by the LLG Coordinator before it becomes available for assigning team and supporters. The platform superadmin can manage all geography levels centrally.

14

Team, Hierarchy & Incentives (continued)

Every registration counted, every coordinator credited

Supporters are the foundation of the campaign — and CampaignMasta counts every single one against the volunteer who registered them and every coordinator above them. This turns your field operation into a measurable, incentivised performance engine.

How Supporter Attribution Works

When anyone registers a supporter, the platform automatically attributes that supporter all the way down the chain to the lowest responsible coordinator — and credits every level above. A supporter registered by a volunteer counts for that volunteer, their area coordinator, their ward coordinator, their LLG coordinator and their district coordinator at the same time.

Role	Numbers Tracked
Volunteer	Supporters they personally registered (their incentive count)
Area Coordinator	Volunteers under them + total supporters (own + all their volunteers')
Ward Coordinator	Total supporters across all areas in their ward
LLG Coordinator	Total supporters across all wards in their LLG
District Coordinator	Total supporters across all LLGs in their district

Built for Leadership Incentives

- Each coordinator sees their own **My Performance** figures: supporters registered, team total, and (for area coordinators) volunteers recruited
- A live **Registration Leaderboard** ranks the team by supporters registered — visible on both web and the Android app
- Higher-level coordinators are credited for everything their sub-teams achieve, so rewards can flow down the chain fairly
- Numbers update the moment a supporter is saved — even from a volunteer's phone in the field
- Because every supporter carries its attribution chain, you always know exactly who brought in which voters

Team Member Provisioning

- Each team member can optionally be given a login account for the web platform and Android app
- Members without logins can still be referenced in call logs, tasks, messages, and events
- Active/Inactive flag — deactivate members who leave without deleting their history or their registrations
- Full audit trail — every member added, approved, or rejected is logged with who and when

15

PNG-Specific Features

Built for Papua New Guinea's unique political and cultural landscape

CampaignMasta includes features found in no generic CRM — built specifically for the way PNG elections work, from Limited Preferential Voting mechanics to DSIP fund tracking and community feast logging.

Preference Deals (LPV)

Papua New Guinea uses Limited Preferential Voting — voters choose 1st, 2nd, and 3rd preference candidates. The Preference Deals module tracks formal agreements with other candidates to direct their supporters' 2nd or 3rd preference votes to you. Record partner name, seat, preference number (2nd or 3rd), ward-level directives, deal terms, and status (Verbal / Agreed / Broken / Inactive).

Community Groups

Track clans, church congregations, women's groups, youth clubs, sports clubs, and business associations by ward. For each group record estimated voting members, current alignment (Strong Support / Leaning / Neutral / Leaning Away), and the key contact influencer. Know which groups support you before every ward visit.

Community Assistance Log

Record every act of community assistance — a feast, school materials, tools, medical supplies, transport, infrastructure contribution — with the recipient group, PGK value, approval chain, and related event. This creates a transparent, auditable record of community engagement.

Competitor Intelligence

Track what your opponents are doing. Log their ward visits, promises, rallies, preference deals, and distributions. For each activity record the source (Confirmed / Social Media / Media Report / Rumour), and assign a response action to a team member. Stay ahead of the opposition.

Development Fund Tracking (DSIP/SDP)

Members of Parliament allocate District Services Improvement Programme (DSIP) and Special Development Programme (SDP) funds. Track total allocation vs amount spent per ward and district. Show communities what funds were invested in their area — or hold sitting members accountable for unspent allocations.

Voter Registration Drives

Organise and track voter enrolment drives by ward. Set a target count, assign team members, run the drive, and record actual enrolments. Enrolled voters are potential supporters — registration drives are a direct vote-building strategy in PNG.

16

Simple Pricing — Everything Included

One setup fee, one fortnightly plan, and the whole platform is yours

CampaignMasta keeps pricing simple. You pay a one-time setup fee to create and configure your candidate profile, then a single fortnightly subscription. Every plan unlocks every module and every feature — there are no paid add-ons to chase.

One-Time Setup Fee — K3,000

A single K3,000 payment to set up your candidate profile, load your geography, and get your campaign live. Pair it with any plan below and the platform is fully usable from day one.

Every feature is FREE on every plan — including the AI tools and the Android app. You only ever pay extra if you choose to send more SMS, WhatsApp, or premium-AI volume than your plan already includes.

The Three Plans (Fortnightly)

All plans include all modules, the AI assistant, and the Android app. Choose a plan by the size of your campaign and the volume of messaging you expect.

Plan	Price	Best For
Starter	K75 / fortnight	Getting started — build your base and run outreach
Professional	K100 / fortnight	Active district or provincial field campaign (most popular)
Full Package	K150 / fortnight	Maximum-capacity campaign with the highest messaging volume

Everything In Every Plan

- All modules: Supporters, Ward Intelligence, Calls/CRM, Messaging, Events & Tasks, Polling War Room, Constituency
- **AI tools are free** — ward briefs and speech notes run on free models already connected (DeepSeek and Kimi)
- **The Android app is free** — offline-first, full coordinator hierarchy, approvals, and incentive tracking
- Full coordinator hierarchy, approvals, geographic scoping, and the registration leaderboard
- Audit logs, data import/export, and reports & analytics

16

Simple Pricing (continued)

What's included, and the only things that are ever optional

Included Credits Per Plan

Each plan comes with a pool of third-party service credits per fortnight. These cover the real costs charged by SMS, WhatsApp, and premium-AI providers. Most campaigns never need more than what is included.

Plan	SMS	WhatsApp	Premium-AI Requests
Starter	100	50	— (free models only)
Professional	300	150	50
Full Package	600	300	150

AI is FREE. The 'Premium-AI Requests' above apply only if you opt to use premium AI models. Out of the box, the AI assistant runs on free models (DeepSeek and Kimi) that are already connected — so ward briefs and speech notes cost you nothing.

The Only Optional Extras

Third-party services have real per-message and per-request costs charged by the providers (SMS gateways, WhatsApp Business, premium-AI). If you exceed your plan's included pool, you can top up a prepaid wallet and pay only for what you use — see Section 18 for the simple per-unit rates. Nothing else is ever charged.

All prices in Papua New Guinea Kina (PGK). Setup fee is one-time; subscriptions are billed per fortnight with no lock-in. Contact WebMasta to get set up before the election.

Settings, Connectors & Integrations

Configure the platform to match your campaign's operations

Campaign Settings let you control how the platform behaves. Connectors link CampaignMasta to external services — SMS gateways, WhatsApp Business, email providers, AI services, and payment systems.

Campaign Settings

- SMS Sender Name:** The name that appears on outgoing SMS messages
- Call Frequency Defaults:** Configurable recall intervals for High/Medium/Low influence contacts
- Export Approval Requirement:** Require manager approval before data exports are generated
- AI Assistant Enabled:** Enable or disable AI features for the campaign
- Polling Day Mode:** Switch the dashboard to polling-day focused view
- Constituency Mode:** Post-election mode — shifts platform focus from campaigning to community service

Connector Types

Connector	Provider Examples	What It Enables
AI	OpenAI, Anthropic, local models	Ward brief and speech generation, AI summaries
WhatsApp	WhatsApp Business API	Send messages via WhatsApp to supporters and team
SMS	Local PNG SMS gateways	Send bulk SMS to consented supporters
Email	Any SMTP server	Email notifications and message delivery
Maps	Google Maps API	GPS-based landmark and location services
Payment	BSP, ANZ, online gateways	Process campaign fees and subscriptions
Storage	S3-compatible	Secure file storage for photos and documents
Webhook	Any HTTP endpoint	Push events to external systems

Every connector can be tested from within the platform. The test runs a health check against the configured credentials and reports success or failure with diagnostic details.

18

Usage, Credits & Billing

Transparent prepaid credit system — know exactly what you are spending

Services that have per-use costs — AI generation, SMS sending, WhatsApp messaging — run on a prepaid credit wallet system. You top up credit in advance and spend it as you use services. Every transaction is logged with full cost breakdown.

Service Wallets

AI Wallet: Covers AI ward brief and speech generation — costs per token/request

SMS Wallet: Covers outbound SMS messages — costs per message

WhatsApp Wallet: Covers WhatsApp Business API messages — costs per conversation/message

Email Wallet: Covers transactional email delivery

Maps Wallet: Covers GPS and maps API calls

Storage Wallet: Covers file storage for large media uploads

Pay-As-You-Go Rates

Once a plan's included credits are used up, extra usage is charged at simple per-unit rates from your prepaid wallet. AI on free models is always K0.00 — rates only apply if you opt into premium AI models or extra messaging:

Service	Unit	Indicative Rate (PGK)
AI — free models (DeepSeek, Kimi)	per request	K0.00 (free)
AI — premium model (optional)	per request	≈ K0.20
SMS	per message	≈ K0.11
WhatsApp	per message	≈ K0.08
Email	per email	≈ K0.02

How It Works

- Each subscription plan includes a free quota for certain services (e.g. 100 AI requests/month)
- Once free quota is exhausted, usage is drawn from your prepaid wallet balance
- If your wallet balance reaches zero, the service stops — preventing unexpected overcharges
- Top up at any time by submitting a top-up record with payment method and reference
- Every usage event is logged: service, action, quantity, cost before and after, balance remaining
- Low-balance alerts appear on the dashboard before you run out

19

Security, Audit & Compliance

Every action logged — full accountability for your campaign data

CampaignMasta maintains a full audit trail of every significant action in the platform. This protects the candidate legally, ensures data integrity, and provides accountability across the entire team.

Audit Log — What Gets Recorded

- Supporter created / updated
- Influencer created / call logged
- Message composed / sent / read / acknowledged
- Task created / completed
- Ward profile created / updated / viewed
- AI brief generated / reviewed / approved
- Data exported / imported / downloaded
- Polling location created / status submitted / incident logged
- Team member created / login provisioned
- Subscription quote created / accepted
- Connector created / updated / tested
- Usage top-up recorded
- Preference deal created / updated
- Community group / assistance / competitor activity logged

Access Control

- Session timeout after 8 hours — automatic logout for security
- Role-based access — team members see only their geographic area
- Multi-tenant isolation — each candidate's data is completely separate
- Export approval workflow — sensitive data exports require manager sign-off
- IP address and device logging on every access
- Data Lifecycle Requests — formal process for data correction, export, archival, or deletion

The CampaignMasta Android App

Your whole campaign in the pocket of every coordinator and volunteer

CampaignMasta ships with a native Android app built specifically for field teams in Papua New Guinea — coordinators and volunteers who work on the ground, often on basic phones and patchy mobile networks. It is designed to be simple enough for first-time smartphone users and tough enough to keep working where the signal does not.

Works Offline — Syncs When You're Back Online

Register supporters, log calls, and record polling reports with no signal at all. The app stores everything safely on the phone and automatically uploads it the moment a connection returns — so no fieldwork is ever lost.

What the App Does

Dashboard Dashboard

Live campaign numbers the moment you open the app

Relationship Calls Relationship Calls

See who is due for a call and log the outcome on the spot

Ward Briefs Ward Briefs

Pull up the local brief before walking into a ward

My Team My Team

Build your sub-team, approve members, manage your area

Supporter Registry Supporter Registry

Register and search supporters in the field, even offline

Messages Messages

Receive team broadcasts; read and acknowledge instructions

Polling Day Polling Day

Scrutineers submit booth status and incidents in real time

Performance Performance

Your registration count, team total, and the live leaderboard

The Full Coordinator Hierarchy — On the Phone

- Add team members with **cascading pickers** — choose district, then LLG, then ward, then area; only valid options appear
- Roles are limited to those below you, so a coordinator can only build their own sub-team
- **Approve or reject** new members and new villages with one tap from the Team screen
- Every supporter a volunteer registers is counted for them and rolled up to every coordinator above
- A green **My Performance** card and a **Registration Leaderboard** turn the field into a friendly contest

Designed for Non-Technical Field Users

Big, clear buttons Big, clear buttons

Large tap targets and simple screens — easy on any phone

Plain language Plain language

Straightforward wording, not technical jargon

Low-end friendly Low-end friendly

Runs on affordable Android phones common across PNG

Survives bad signal Survives bad signal

Offline-first design with automatic background sync

Secure login Secure login

Each member gets their own username and password

Always current Always current

Pulls the latest team, geography, and tasks when online

Give every ward and area coordinator the app and your campaign gains a real-time, ground-level nervous system — registrations, calls, and reports flowing upward from the village all the way to the candidate's dashboard.

CampaignMasta is maintained and supported by WebMasta — PNG's leading digital services company. Support is available via phone, WhatsApp, and email throughout the campaign period.
